

PEDRINI
High-Tech Inside

OUR WORLD

Our plants.
Our passion.
Your success.

Since 1962.

We manufacture plants and machines for all phases of natural stone processing - from cutting to polishing, from resining to finishing - which ensure precision, reliability and production efficiency.

We are able to quickly respond to **customer needs**, studying new processing solutions with the utmost respect for the raw material, thanks to a high level of specialization and technical **expertise** and continuous investments in **research and development**.

Our sales structure **has 8 area managers and 60 agents** engaged all over the world to constantly assure consultancy, technical and sales assistance and after-sales service.

A high efficiency group which nowadays counts 120 employees on a covered area of over 30.000 m².

Our mission

We are a «pocket-sized» multinational company.

We provide natural stone processing plants and machinery that help our customers maximize their production capacity and the quality of the final product.

We work with **honesty and transparency** to keep the promises and agreements made with customers.

We promptly respond to market requests delivering state-of-the-art products and services that match every need.

Our vision

That of Pedrini is a dream that takes shape every day thanks to the **work, passion and commitment** of an entire group of professionals.

We want to **innovate the natural stone industry** with ever-new technological solutions with extreme attention to detail.

We do this by continuously investing in research and development with the aim to satisfy our customers with effective and reliable products with the utmost respect for the raw material.

Our values

Truth

For us at Pedrini, it means **keeping the promises made to customers**, and it is precisely this that allows us to build relationships of mutual esteem and trust. All of our communication is based on the respect of this value.

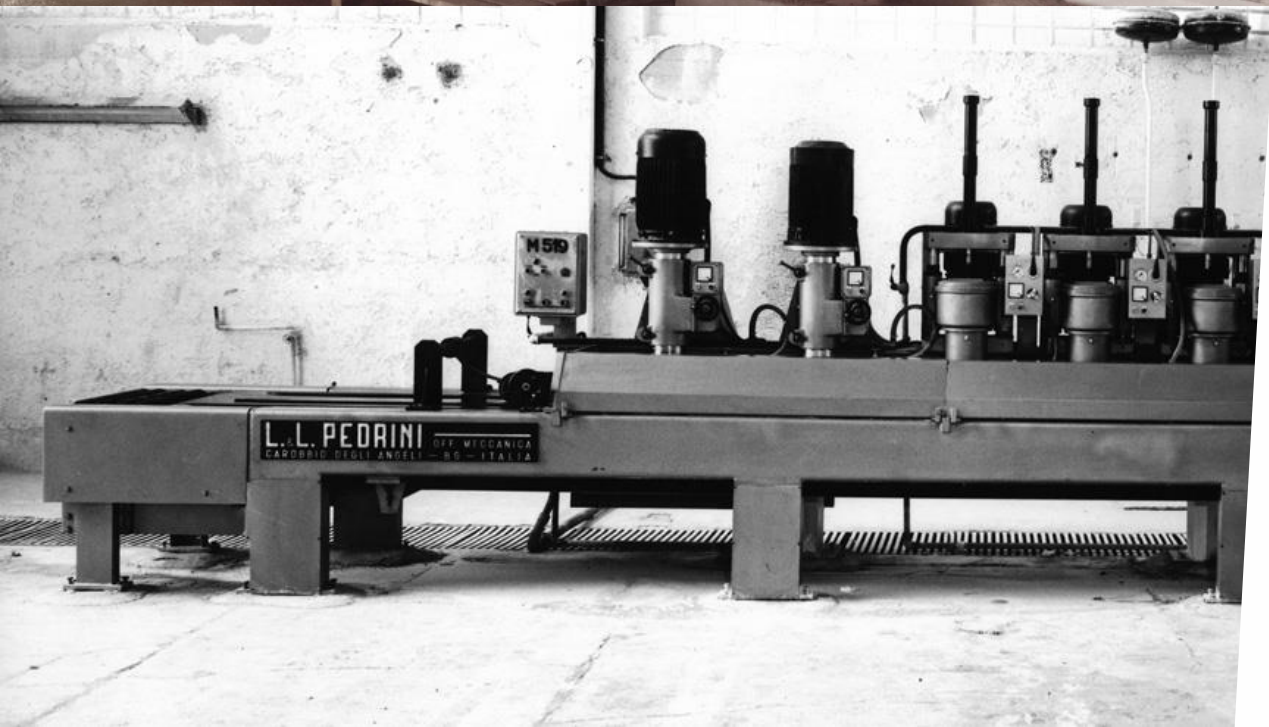

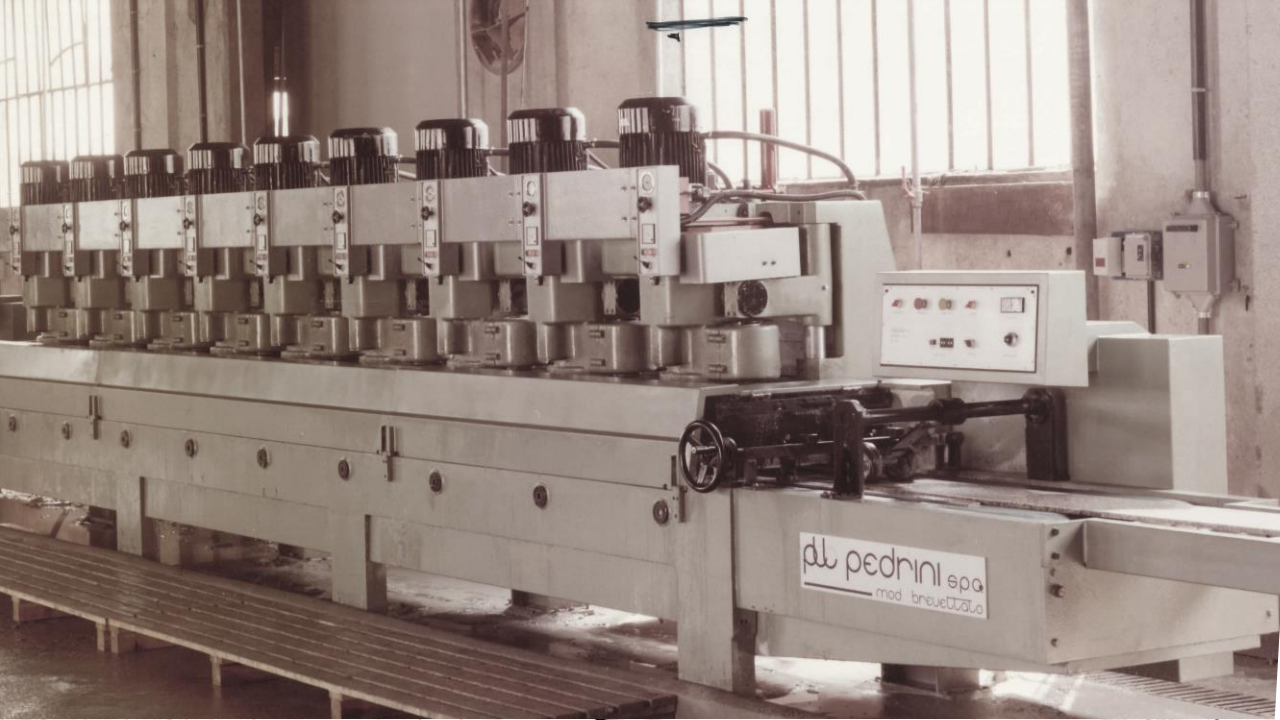

Passion

We work with dedication and care. Customers know that they can be listened to and find an answer to their requests and production needs that will then be take shape and become high-performance customized plants. The Pedrini team is composed of motivated people with goals to reach and the desire to achieve them.

Specialization

When we do something we want to do it well. This is the concept behind our desire to specialize in the natural stone market. We have all the necessary skills and tools to be a valuable partner and help our customers in the best possible way.

Our history

From 1962 to the present day

Smart solutions spring from our deeply technological soul, developing a new concept of manufacturing: more flexible, more efficient, more connected.

In the present and in the future, Pedrini will continue to grow and improve the efficiency and production capacity of its machines, innovating by investing in research and new technologies.

Our milestones

1962

The business history of Luigi Pedrini begins in 1962, when Pedrini is founded and starts repairing marble cutting machines and producing spare parts.

A few years later, the first marble block cutter is presented.

1975

Pedrini introduces the first automatic line for the production of marble tiles, later known worldwide as MODULMARMO.

In the following years Pedrini wins the even greater challenge to industrialize the modular processing of granite, which was considered impossible due to its hardness. Pedrini presents its first automatic line for the production of MODULGRANITO tiles.

1971

Great care for quality and extreme fairness and honesty determine the company's great success from the earliest periods. We become an industry leader, distributing our products in Italy and abroad.

Luigi Pedrini decides to implement a production diversification which until then was specialized in the manufacture of block cutters.

1994

The first slab polishing line is installed.

This is one of the most significant milestones for Pedrini. In fact, the production and installation of this line has allowed us to gain a leading position in the slab polishing industry, further confirming our reliability.

Our milestones

2005

Pedrini is the first company in the world to mass produce slab resin plants with a microwave oven in the production line.

It is a technology that offers the fastest resin treatment for repairing marble and granite slabs.

2017

Pedrini inaugurates its new Research and Development Center: a large facility equipped with sophisticated technologies for the development of new projects, with a focus on Industry 4.0.

Here Pedrini experts work alongside customers to conduct material tests.

2008

The first Multiwire Jupiter multiwire machine using 7.3 mm diameter diamond wires was manufactured.

Thanks to this machine, which has been innovated and improved since then, Pedrini has been able to consolidate its leadership position in the industry.

2022

Pedrini launches a new version of the Galaxy polishing machine characterized by three moving beams that can move synchronously or independently.

This feature allows to simultaneously manage slabs with different widths, without the need to totally empty the machine at each batch change.

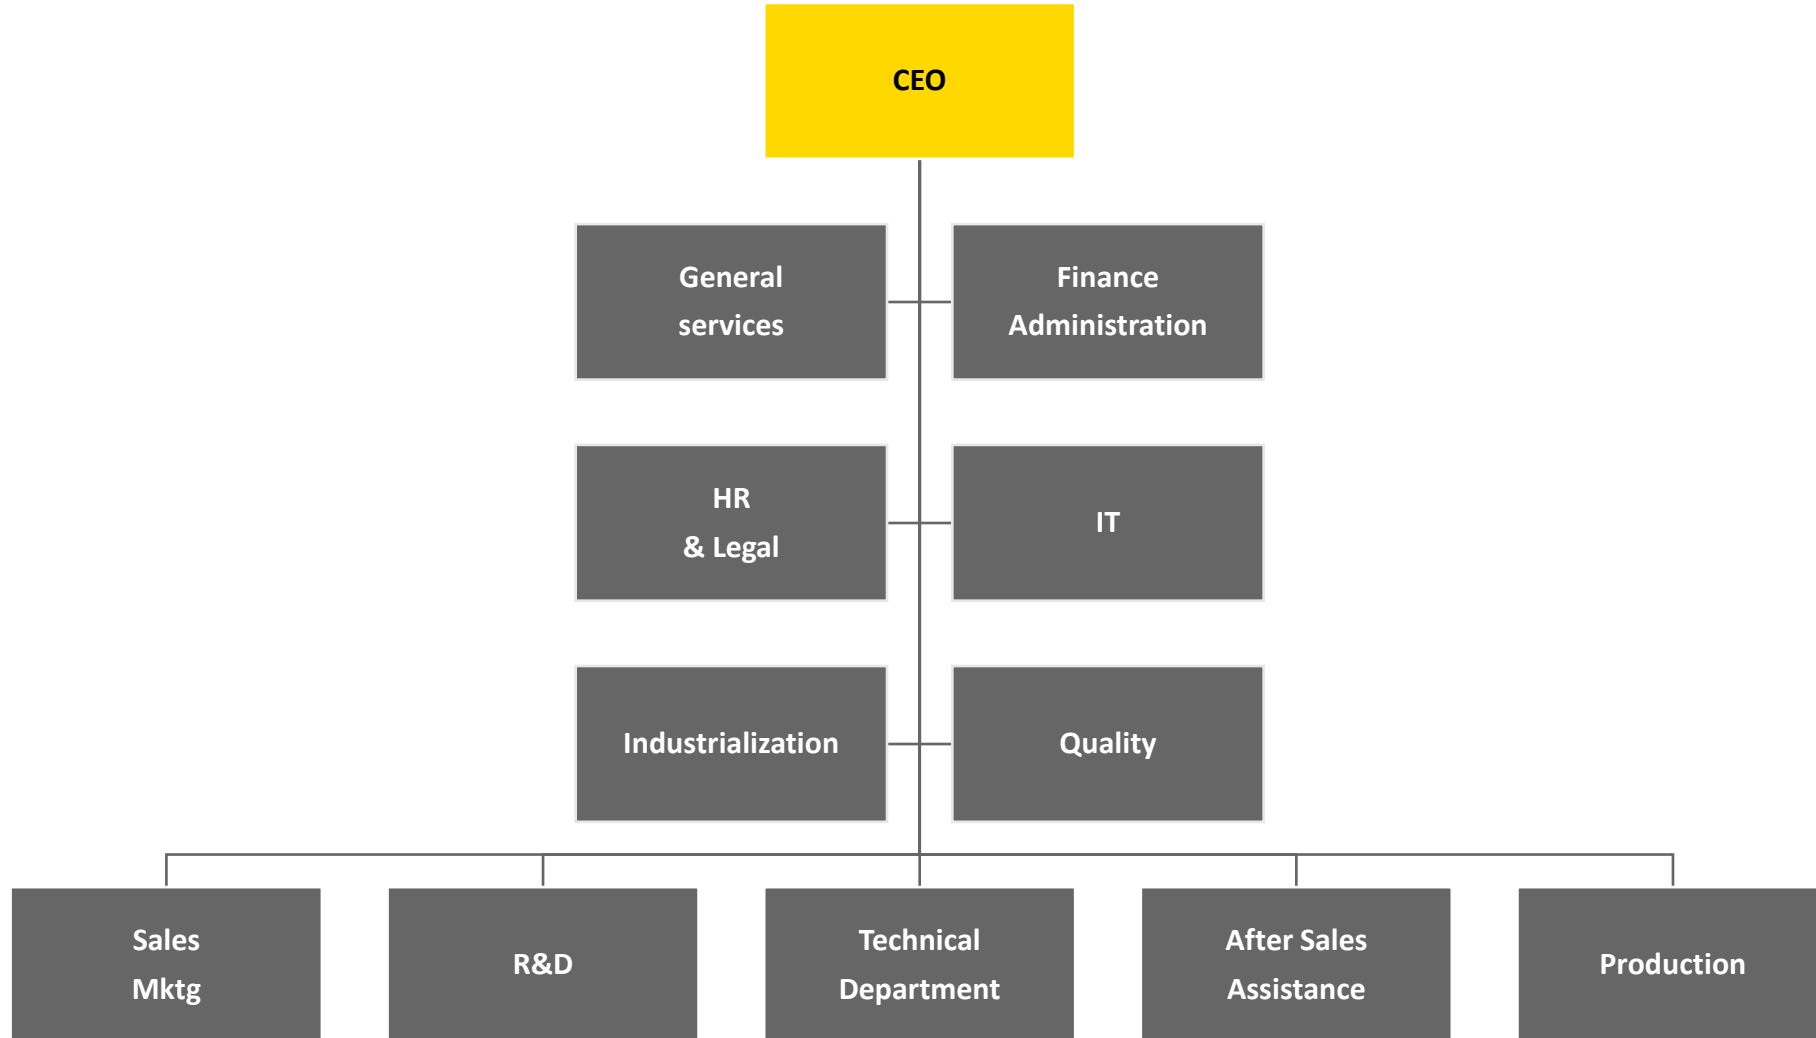

**“I saw a man looking at
the mountains... he was my father”**

Giambattista Pedrini
CEO

This picture hanging in the agora of our company shows Pedrini soul and history with its founder big eyes constantly looking at you, the great mountain representing the natural stone, our technologies and machines, Mr. Luigi Pedrini's profile, secretly repeated 5 times, confirming his discreet character.

Our organization chart

R&D

A research and development center for new technologies

The new Research and Development Center has been inaugurated in 2017. It is equipped for all **the technical tests** and experiments necessary both for the launch of new machines and for carrying out tests on materials.

Over the years it has become a real working method, with the conviction that **technological development is one of the key factors for the company's competitiveness** on the market.

The **continuous improvements** to the plants and the new machines offered allow customers to increase their productivity gaining a strong competitive advantage.

Furthermore, customers have access to the Research and Development Center and are supported by Pedrini experts to carry out tests on materials in order to improve them and optimize processing operations.

Technical department

A team of skilled technicians always by your side

The technical department is composed of 20 engineers and specialized technicians operating with the most advanced instruments and software for **mechanic and electronic design**.

Owning a PEDRINI machine allows each customer to get several exclusive services meeting the most specific requirements. The customer's order activates a process following the product life, from the initial order to the After Sales service.

The Engineering Department evaluates the customer's requirements and prepares a **customized plant proposal** considering the **space/operator factors**.

Production

**Wide dimensions and large equipped spaces.
For safety workrooms facilitating the productivity**

Large and bright workrooms, equipped for the easy handling of big elements, are essential to ensure maximum safety to all workers during every stage of machinery manufacturing.

Careful checks carried out during the assembling stages allow to check the mechanisms and the automatism are in compliance with the strict parameters imposed by the in-house tests.

After-sales

The After-Sales Department: our flagship

An effective after-sales service is one of the assets recognized to the company by the market.

After the installation of the plants, **customers are flanked and trained by our technical team.**

Excellent timing in problem resolution is ensured by the Headquarters with the aim to reduce downtimes or delays in the production.

In addition, **spare parts** are managed by an **automated warehouse** that ensures their proper management **and speeds up shipping times.**

Industry 4.0

**Interconnection and traceability.
Communication is the future
of the production technology.**

Pedrini has innovated and **digitized its processes** by adapting them to available technologies and transforming the company into a **smart industry**.

Today, **interconnected and integrated processes** allow us to track the information flows and the movement of materials for the production management and planning.

It is possible to know, in real time, in which phase the individual component that composes the machine or plant is located, to act promptly in case of delays in the supply chain, and to plan corrective actions, thus combining the concepts of **Industry 4.0** with those of Lean Manufacturing.

Our machines and plants

Our tailored approach to meet the needs
of each customer

Our machines

The value proposition and the principles shared by the company translate concretely into the creation of **cutting-edge systems and machinery**, designed to always answer to the requests and needs of each customer.

The range of Pedrini products is the result of continuous investments in research and development: this allows us to always offer unique and innovative technologies to the market.

Pedrini manufactures systems and machines for all **phases of natural stone processing**: cutting, resining, polishing and finishing.

Multiwire machines

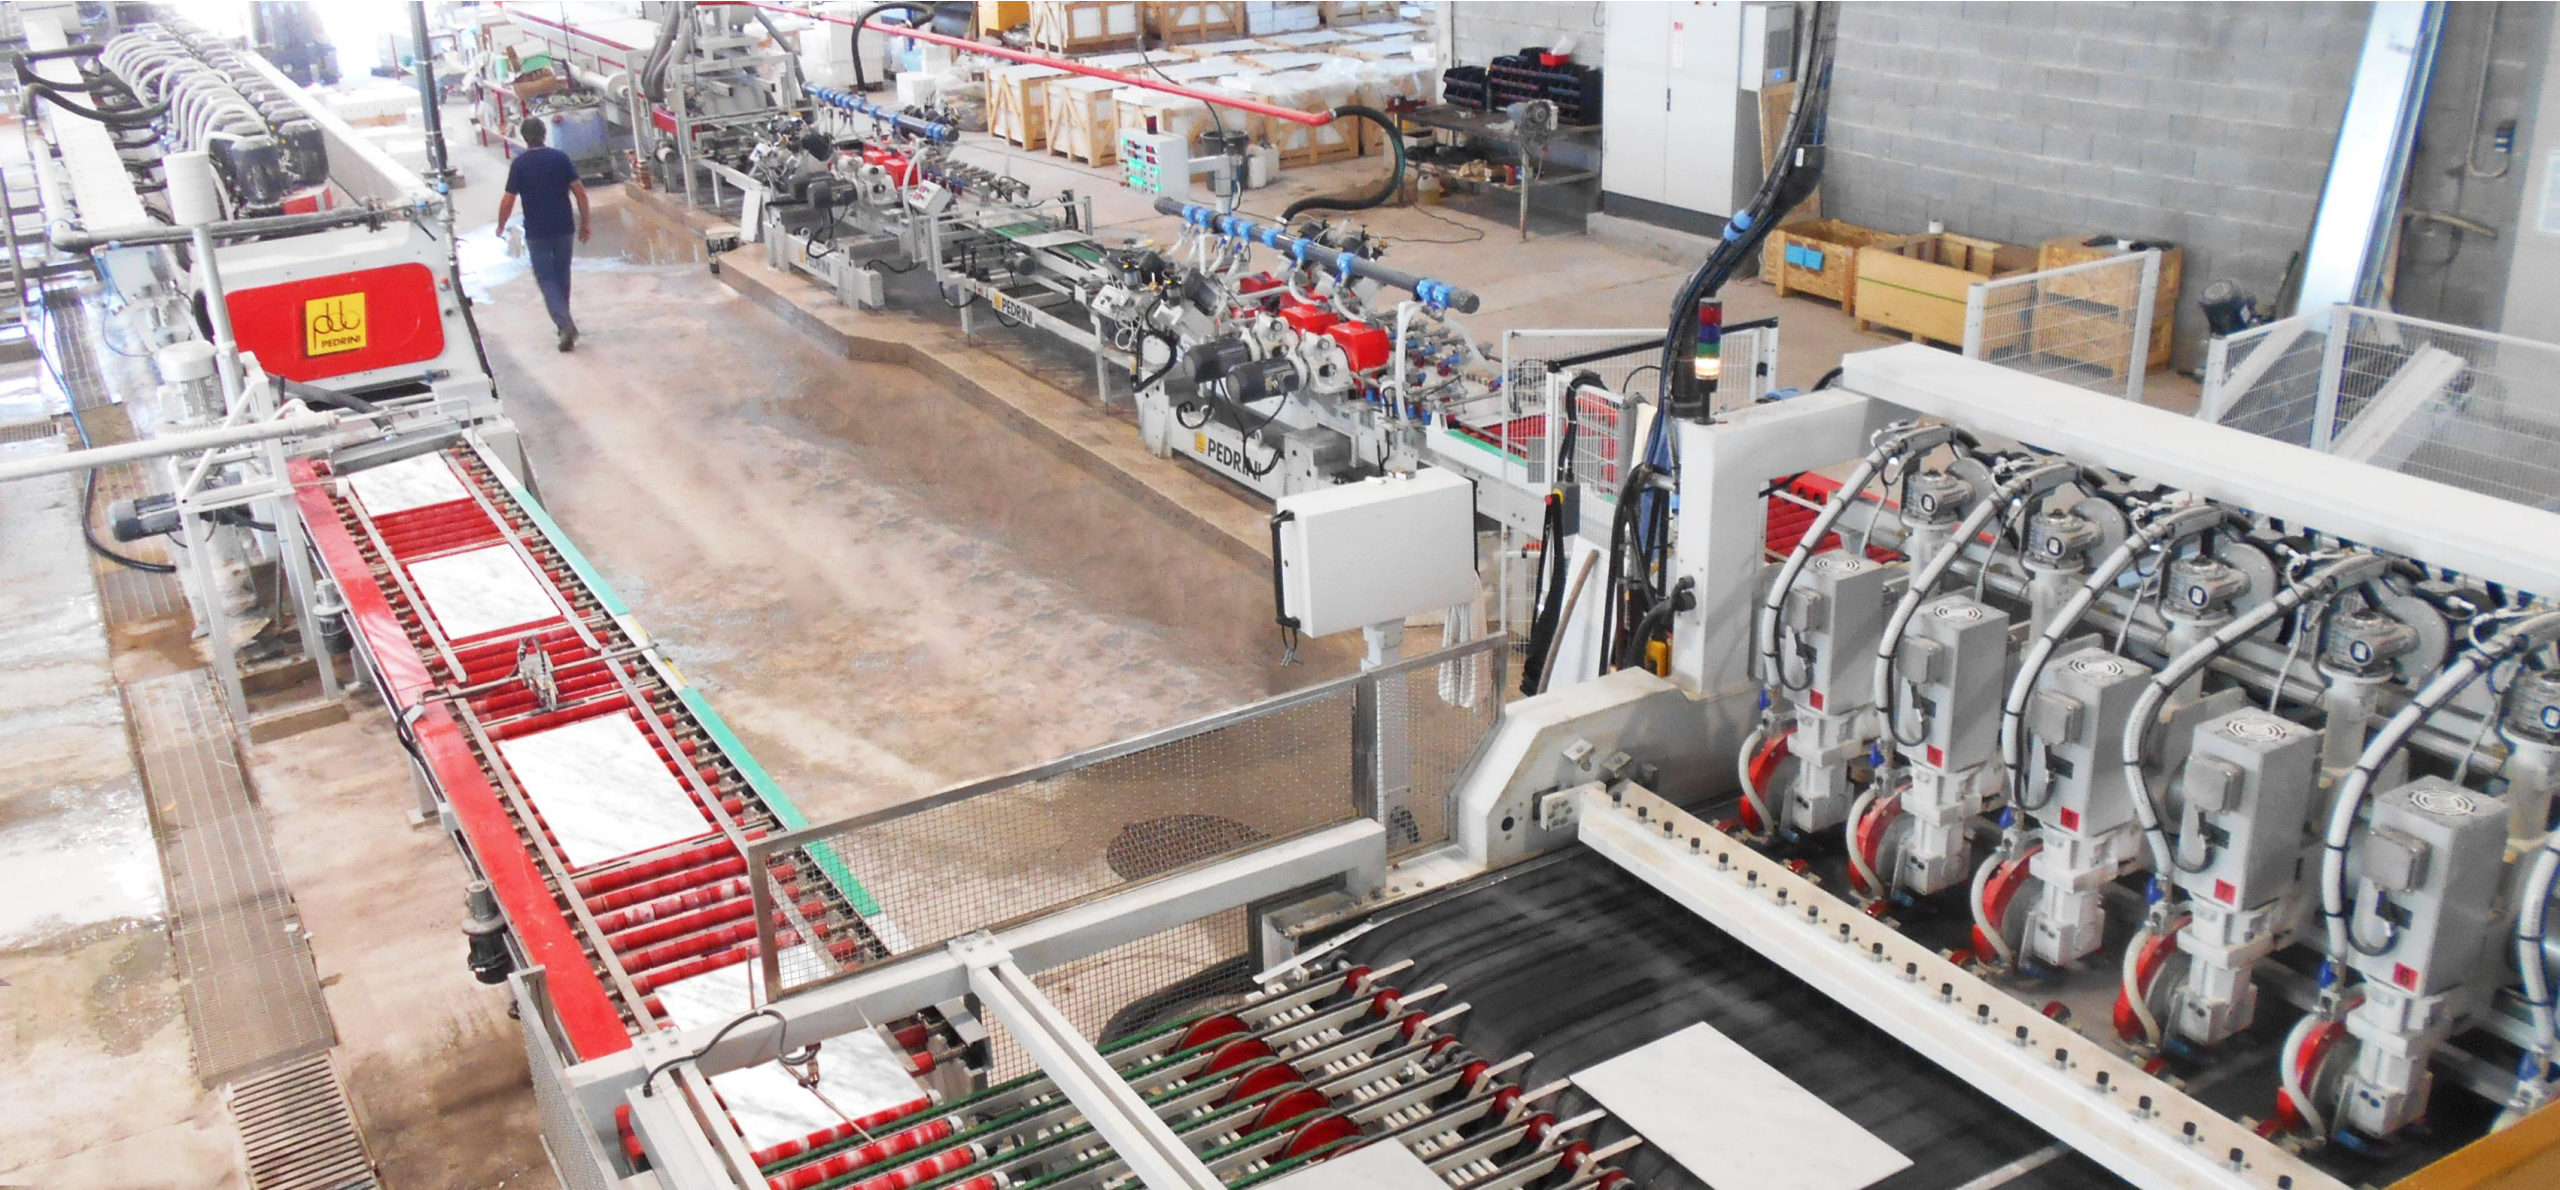

Calibrating, resining and polishing lines

Calibrating, resining and polishing lines

Complete plants for tiles

**Our plants.
Our passion.
Your success.**
